## Summary

Aspiring software developer with hands-on experience in front-end development and a strong foundation in Python, JavaScript, and web technologies. Currently working as a Front End Developer Intern, gaining practical experience in responsive UI development, UI/UX, and API integration. Passionate about building user-friendly web applications and continuously improving software development skills.

## Technical Skills

**Programming:** Python Programming Language.
**Web Technologies:** HTML, CSS, JavaScript, React.js, Boot Strap.
**Database:** SQL, MySQL.
**Tools:** Git, GitHub, VS Code.

## Education

2022 - 2026 Bachelor's Degree at **Srinivasa Engineering And Technology** (CSE) GPA: 7.9

2020 - 2022 Class 12th, **Siddardha Junior College** (MPC) GPA: 8.3

2019 - 2020 Class 10th, **ZPP High School** GPA: 9.2

## Internship Experience

**Front End Developer Intern– Country Chicken Pvt. Ltd.** June 2026– Present

– Developing responsive front-end interfaces and integrated APIs for real-world web applications
– Collaborating with the tech team to improve UI/UX and application performance
– Working with modern web technologies in a professional development environment

## Projects

**Heart Disease Risk Analysis System (Final Year Project)** GitHub Repo, View Website

As part of a 4-member development team, I contributed to the design and implementation of a Heart Disease Risk Analysis System focused on analyzing patient health data to identify potential heart disease risks. The application was developed using Python, Streamlit, and Scikit-learn, with implementation of machine learning models such as Random Forest, Logistic Regression, SVM, and Gradient Boosting for comparative analysis. The system provides real-time prediction and visualization features, helping users understand important health risk factors through an interactive web interface.

**AI-Based Crop Disease Detection Web App (Mini Project)** GitHub Repo, View Website

Developed an AI-based Crop Disease Detection Web Application designed to assist farmers in identifying crop diseases using leaf images. The system analyzes uploaded or real-time captured images and predicts possible crop diseases with treatment recommendations. The application includes multilingual support, disease diagnosis, health scoring, and real-time camera integration. Technologies such as Python, Streamlit, image processing, and machine learning techniques were utilized to improve accessibility and usability for agricultural support systems.

## Certifications

**NPTEL Certification in Introduction to Machine Learning** July - Oct 2025

– Completed NPTEL Certification in Introduction to Machine Learning (IIT Madras), demonstrating foundational knowledge in machine learning concepts and algorithms. – View Credentials

**Python Full Stack Certification – EduSkills Academy** June - Sep 2025

– Successfully completed Python Full Stack certification from EduSkills Academy with practical exposure to frontend development, backend integration, database connectivity, and full-stack web application development. – View Credentials

## Other Skills

**Soft Skills:** Leadership, Quick Learning, Time Management, Ability to Stay Calm Under Pressure.

**Languages Known:** Telugu, English, Basics of Hindi
